**UNIVERSITY OF GEORGIA**

**Postdoctoral Position in Nano-Optics  
University of Georgia / Department of Physics and Astronomy**

The Department of Physics and Astronomy at the University of Georgia invites applications for postdoctoral position. Our lab studies problems in quantum materials using a combination of high-resolution near-field and far-field laser spectroscopic approaches and interpreting results using ab initio simulational methods. Applicants must have a PhD in physics or a related field. We are particularly interested in candidates with expertise in experimental nano-optics and spectroscopy. Previous experience in nano-fabrication is a plus. But, applications from highly motivated candidates, with a strong background in some other area of spectroscopy and the ability to learn quickly, are also quite welcome. Interested candidates should send an email to Prof. Yohannes Abate [yohannes.abate@uga.edu](mailto:yohannes.abate@uga.edu). Please include CV, list of publications and two references. The position is available immediately.
