Instructor: Dr. Nandana Weliweriya Email: nandanaw@uga.edu

Zoom Lectures: MTWRF 9:15 am - 10:15 am Office Hours: by appointment (just e-mail me)

Introduction: This course is the first semester of introductory level physics sequence for science majors. This semester focuses on Mechanics, the study of motion. You will learn about the concepts associated with the study of motion, and we will see how velocity, acceleration, force, momentum and energy are related to each other through the Laws of Mechanics. In addition, you will be introduced to gravitation. Most importantly, we will develop a “toolbox” of techniques for solving problems involving motion.

If you are a prospective physics or astrophysics major, then this course is probably not for you. Please talk to Dr. Cooley (Physics) or Dr. Caillault (Astrophysics) about other options.

Student Learning Outcomes: In successfully completing this course, students will:

- Develop and demonstrate a working knowledge of the principles of mechanics to many different kinds of motion: constant-force motion, uniform circular motion, statics (lack of motion), collisions, rotations and oscillations;
- Demonstrate an ability to apply conceptual understanding and quantitative reasoning skills to solve physics problems in these areas;
- Develop and demonstrate skills in gathering, sorting, analyzing, modeling and communicating scientific data.

Prerequisites/ Corequisites:

As you know from the first semester of physics, this is a quantitative science. We will address the qualitative and conceptual aspects of mechanics, however, much of the work in this course involves mathematics, solving mathematical problems, and most importantly interpreting physical problems. You will be asked to communicate your understanding of the material in many ways – mathematically, graphically, visually. You are expected to have a working knowledge of college algebra, trigonometry, and basic geometry.

If you need to brush up, be sure to read Chapter 1 and Appendix A as soon as possible. Please let me know if you are concerned about your preparation for this course.

Important Dates:

- Midterm #1 ................................ 18, June 9:15 am - 10:15 am
- Midterm #2 ................................ 01, July 9:15 am - 10:15 am
- Midterm #3 ................................ 15, July 9:15 am - 10:15 am
- Final Exam (comprehensive) .............. 30, July 8:00 am - 11:00 am
Course Resources

Required Materials

- *Physics*, 5th ed., by James S. Walker (Pearson). You may use older editions if you wish, or even any other algebra based Introductory Physics textbook, but you are responsible for knowing about any changes in content;

- You will be allowed to use a calculator: A simple calculator such as the TI-30X series will do just fine, but a fancier graphing calculator is also acceptable. On exams, you will be limited to the functions that a standard scientific calculator can perform. No graphing, solving, programming, etc.

Online Resources

- The eLearning Commons ([http://www.elc.uga.edu/](http://www.elc.uga.edu/)) will serve as a repository of course information: homework and exam solutions, grades, announcements, etc.;

- Please check your UGA email and eLC (eLearning Commons) daily. The UGA email system and eLC will be used (infrequently) for announcements.

- Online assignments are an essential part of the course. You’ll complete this work on the LON-CAPA homework system at [https://spock.physast.uga.edu/](https://spock.physast.uga.edu/).

Other Resources

- If you need help with understanding principles and concepts from class or homework assignments, I do encourage you to first talk to your peers. If that is not helping come see me during my office hours. If you need additional time please set up an appointment (by email);

- Tutors are available through the physics department, and further information with hours will be shared on the first day of class.

- Additional tutors are available either through the Division of Academic Enhancement ([https://dae.uga.edu/services/tutoring/](https://dae.uga.edu/services/tutoring/)) at Milledge Hall and Miller Learning Center, or through the Department of Physics and Astronomy ([https://www.physast.uga.edu/tutors/](https://www.physast.uga.edu/tutors/)).

**Assessment:** Your overall grade will be determined from your course performance, weighted as follows;

- 25% Cumulative final exam grade
- 45% Three in-class exams (20%/15%/10% for highest/middle/lowest grades)
- 10% Homework grade
- 15% Laboratory grade
- 5% In-class participation

- Letter grades will be assigned from your overall numerical grade according to the following: **A** 90.0, **A-** 87.5, **B+** 85.0, **B** 80.0, **B-** 77.5, **C+** 75.0, **C** 70.0, **C-** 67.5, **D** 60.0, **F**

- Overall numerical grades will not be rounded (i.e., 89.99 is still an A–);
• Any requests for a regrade of an assignment or exam must be made no later than one week after it's returned. For a regrade I will look at the entire assignment/exam, not just one problem, and this may raise or lower your score. Regrade requests (including those for online homework) should be accompanied by all your work;

• Like any other measurement, grades possess a degree of uncertainty. Factors such as improvement, effort, and participation may help borderline grades. Lobbying, however, will not, and requests for extra credit will be ignored, so don’t ask!

Exams:

• All exams will be closed-book and closed-notes. You may use a scientific calculator for arithmetic only, not for algebra, calculus, or graphing; all memory and programs must be cleared. I’ll provide you with a formula sheet for each exam, and will also post it to eLC before the exam. The formula sheet’s purpose is to release you from memorizing formulas, and allow you to focus your studying on understanding the principles and concepts involved;

• Exams will comprise both conceptual and problem-solving aspects, similar to homework, practice problems, and in-class examples. Unless told otherwise, you must show your work on each problem in order to receive full credit. Partial credit is awarded (based on your work) for incomplete or incorrect answers, so it is usually in your best interest to attempt every problem. Detailed solutions will be posted to eLC after each in-class exam;

• Exams are designed to test your understanding thoroughly and to distinguish among levels of performance. In order for exams to be effective assessments, raw scores will often be lower than the expectations created by the “standard” letter grade cutoffs. These raw scores will be “re-scaled” into numerical grades. This conversion is based mostly on the difficulty level of the exam and partly on the distribution of raw scores. Your re-scaled grade will never be lower than your raw score. Also, unlike a “grade curve”, you are not competing against your peers; it is possible for everyone to get an A or B, for example;

• **There will be no make-up midterm exams.** If you need to miss a midterm exam for a serious, documentable reason, your final exam grade will be substituted for one of your midterms, making your final exam worth 30-40% of your overall grade (depending on how this grade compares to your other midterm exam grades). This policy is designed to handle unavoidable situations like medical or family emergencies, or previously scheduled academic or athletic events. You must contact me as soon as you know of the conflict (before the exam if at all possible), and you must provide sufficient documentation in a timely fashion. (An example of unacceptable documentation is a note stating only that you visited the health center, with no indication of the severity and nature of your illness.) Do not presume that your situation or documentation merits an excused absence; that determination is not your prerogative. **Unexcused exam absences will result in an exam grade of zero.**

Homework:

• Sustained practice with physics problems is crucial to understanding physics, so you will have regular homework assignments. Assignments will be posted online through LON-CAPA, and most problems will require you to submit your answers online. However, a few assignments may also have a handwritten component. Detailed solutions will be posted to eLC after the due date;
• Assignments will be weighted equally unless otherwise specified. At the end of the semester, provided that you complete a course evaluation, I will drop your lowest two assignment percentages in calculating your overall score. (If you don’t submit a course evaluation during the allotted time, then none of your assignments will be dropped.) This dropped-assignment policy compensates for the unavoidable circumstances that may occasionally prevent you from submitting homework on time (e.g., illness, scheduled event, Internet failure, etc.). Late homework won’t be accepted or excused. However, even if you miss the deadline to submit homework answers for credit, you should still make every effort to work through all the problems on every assignment, in order to master the topics covered. You will likely do very poorly on exams if you don’t work through each assignment in its entirety;

• Teamwork is an effective way to learn, so I encourage you to collaborate with your classmates. Ask them questions; critique others’ work; explain your reasoning to your study partners. However, don’t mistake teamwork for plagiarism. You’re responsible for understanding all the details of every solution, and your solutions must be your own. Copying from any source of homework solutions is a violation of academic honesty policies. Since you can’t collaborate on exams, homework is your best opportunity to develop your own problem-solving skills. If you’ve read this far in the syllabus, please write your favorite color under your printed name on the agreements form.

Lab Sessions:

• Labs begin on June 15 and 16.

• This course also requires a laboratory component, PHYS 1111L, that will account for a portion of your grade (you sign up for the laboratory section separately). No course grade will be assigned until the laboratory requirement is completed.

• For information about the lab section for this course, please consult the lab syllabus available at https://www.physast.uga.edu/courses

Class Preparation:

• You are required to read the assigned textbook sections before the class in which those topics are discussed;

• Regular reading is an important part of your preparation for class. Don’t expect to understand everything in the textbook at first sight! However, your learning effectiveness class will depend on having encountered the material prior to class. You should jot down notes and questions as you read; this will aid in organizing your class notes and will remind you to ask for clarification.

In-Class Activities:

• You will often be asked in class to work on conceptual and quantitative questions, both individually and in small groups. These activities allow you to demonstrate your sincere effort and active class engagement;

• A fraction of these in-class activity scores will be “dropped” (similar to the fraction of dropped homework assignments) to compensate for the occasional absence, or similar issue.
Course Policies

Academic Honesty

• UGA has a comprehensive academic honesty policy, A Culture of Honesty, which is available from the Office of Instruction at http://honesty.uga.edu/. This policy covers all academic work. All students are responsible for fully understanding and abiding by this policy. If you have any questions about the appropriateness of your actions or your work, you are obligated to ask me for clarification;

• I take the issue of academic honesty very seriously, and it is my responsibility to uphold the University’s policy. This means, among other things, that I won’t hesitate to report evidence of dishonesty to the Office of the Vice President for Instruction. Typical consequences of academic dishonesty on homework or an exam range from receiving a zero for that grade, to failing the course, to being suspended from the university.

Disability Accommodations:

• I will make every reasonable effort to accommodate students with documented disabilities. Students requesting accommodations must provide documentation from the Disability Resource Center during the first two weeks of class (or within two weeks of DRC certification).

Withdrawals/ Incompletes:

• The Undergraduate Bulletin (http://www.bulletin.uga.edu/) and the Registrar’s Office website describe the University policies regarding withdrawals and incompletes (http://reg.uga.edu/policies/withdrawals). If you don’t complete the initial required administrative tasks of the course (e.g., the questionnaire), or are demonstrably not attending class and completing work, I may withdraw you from the course for “excessive absence”;

• If you are considering withdrawing from the course, you should discuss your choice with me beforehand (In many cases, students are doing better in the course than they think they are);

• A grade of incomplete is not appropriate for a student who has missed a large portion of the course assessments, for whatever reason.

Student Distress:

• If your course performance is significantly affected by issues beyond your control, I urge you to let me know and to seek assistance promptly from Student Care and Outreach (http://sco.uga.edu/), part of the Office of the Dean of Students. It is always easier to address exceptional circumstances when these issues are raised as early as possible. Waiting until the end of the semester to take action may limit my ability to provide appropriate support.
Technology Policy:

- Cell phones should be turned to silent or off during class. Texting, checking email, posting to Facebook, etc. are not allowed during class. These activities are distracting and disrespectful to your fellow students.

Student Responsibilities:

- Above all, you have the right to expect courtesy from your fellow students, and the same will be asked of you. Courtesy includes the expectation that everyone will come to class ready and willing to learn and interact, and able to ask or answer questions freely. Courtesy also implies that you arrive on time, stay until the end of class, and remain focused during class.

- Attendance is required. Class attendance keeps you well connected to the course and to the members of your group. In physics courses, each new concept builds on earlier ones, so mastering key concepts is critical. If your schedule makes it difficult to attend class regularly and on-time, you shouldn’t take this course.

- The most common causes of missed classes are lack of sleep and time pressure from other obligations. If this starts happening to you, you need to seek out advice on how to set priorities and manage your time effectively.

- If you miss class, it’s your responsibility to find out from other students what you missed. Talk to your group-mates, and notify them of your absence in advance if possible. They’re relying on you to be caught up by the time you return to class.

- You must prepare for class. Class time is valuable and limited. Using that time effectively requires that you’ve had some exposure to the necessary concepts, so that you can ask good questions and practice applying those concepts in class. Evidence from other courses with this format suggests that the time you spend preparing for class significantly reduces the amount of time needed for homework. Finally, class discussion will not cover all of the assigned material.

- Ask for clarification on anything you find unclear, ambiguous, or unspecified. This includes both course policies and physics topics. Ignorance is never a valid excuse. It’s your responsibility to show me what you do and don’t understand through your questions, so that I can help you learn. You help influence the pace of the course. Silent confusion benefits no one.

- I can’t emphasize enough the importance of homework! Just as with other areas of learning, your physics problem-solving skills will improve only by practicing regularly and conscientiously. You’ll get very little value out of homework if you procrastinate, or if you depend on the efforts of others. If you start to get behind, get help early before the problem gets worse!
